

VuWall2 v2.11

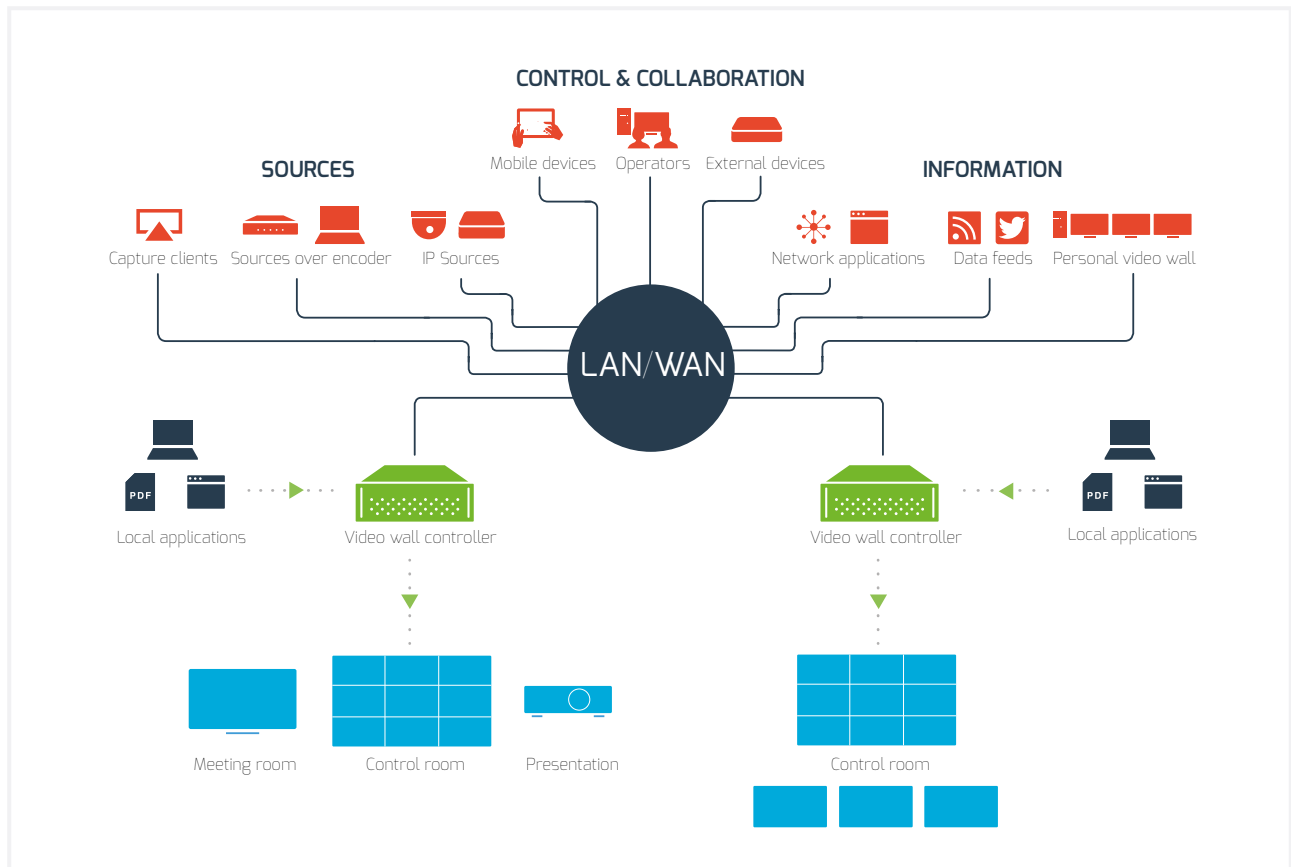

// Video wall control
and collaboration //

VuWall

Multi-platform video wall control software

VuWall2 is a powerful software solution for the operation of large screen systems and multi-monitor systems. VuWall2 provides operators with control over all connected signal sources and enables distribution of information in

control rooms and presentation spaces. The system is based on an intuitive user interface, which reduces reaction time and makes the operation of video wall systems more efficient.

Connectivity

VuWall can work with multiple systems in the network. From every operator client, users can easily bring sources to any display surface across the network: any display, large video walls or even another operator's PC.

Collaboration & control

Each operator can work with the VuWall client software independently and can manage all sources, displays and client captures. The multilingual Interface is intuitive, and it is very easy for operators to work with in critical environments, even in emergency situations. Operators can collaborate with each other and share information together on any kind of display.

A dedicated configuration for each application

Standard

Standard control rooms with collaboration requirements and digital signage applications with scheduling.

Pro

Mission critical and security sensitive control rooms with extensive collaboration requirements and user profile administration.

v2.11 Overview

Product comparison guide	Standard	Pro
General		
Easy to use, intuitive web-GUI with standard control pages	○	○
Compatible with Apple, Android, Windows and web browsers	○	○
Load, save and auto-start layouts	○	○
Simple password sign-in	○	○
API for third party devices (Crestron, AMX, etc.)	○	○
Sub-region management	○	○
Task Scheduler	○	○
Control panel designer to create custom interfaces	○	○
Scrolling text and messages with text files & RSS feeds	○	○
Manage input sources incl. OSD and cropping & adjustment	○	○
Manage local applications	○	○
Universal viewer (ex: pictures, documents, videos)	○	○
Control of third-party devices (displays, matrix switches, etc.)	○	○
Manage multiple video walls from a single client	○	○
Scripting tools (macro commands)	○	○
Embedded Web Viewer incl. support of user credentials	○	○
Active preview of sources on client interface	○	○
Grouping of sources, layouts, and scripts		○
Advanced cycling of sources		○
User Profile Management & Active Directory support		○
Security Logging for any events and activity of the user		○
Alarm management (scripting) & support for I/O devices		○
Birds-Eye-View and multi-surface support		○
Hardware and software decoding		○
Capture networked computers & control remotely incl. VNC		○
KVM on input sources		○
Genetec Security Center Integration		○
Optional Module		
VuWall2 Plugin for Genetec Security Desk		○
External Matrix Support		○
Encoding & Recording of HDMI inputs, complete wall or area of interest on the wall		○
Transition management for effects, transparency, color keying, etc.		○
Color Detection on capture and VNC sources		○
Redundancy Module for fault-tolerant systems with dual videowall controllers		○
