VuWall

We don't do video walls

We only make sure you can view it all

/ Control and collaboration

Situational awareness in a control room is all about being able to display the relevant combination of information in the right place at the right time: on the video wall, on the operators' desks or in a crisis room; a security monitoring environment or a traffic surveillance. It is also about interacting with the sources of information and about collaborating. Thanks to the power and the ease of use of both TRx and VuWall2 software, operators and supervisors in control rooms can concentrate on their mission and be more productive. /

/ AV network management

By definition, an AV network consists of many connected devices that need to be deployed and operated within multiple rooms, floors or buildings. The complexity of such an installation may suggest a very cumbersome experience both in the configuration, the operation and the maintenance phase. With VuWall's TRx AV network management solution, these processes are performed with simplicity thanks to an intuitive "drag and drop" user interface. Future proof installations are guaranteed thanks to the multi-platform compatibility of TRx. /

/ Presentation

It doesn't matter whether the display area is a simple projection screen or a multiple display video wall; with CoScape, VuWall's wireless presentation system, presenters don't have to worry about how to have their content appear on the screen when they need it. As soon as a source is connected, CoScape detects the new content and displays it on the display surface. If other windows are already open, the windows will rearrange themselves to make room for the new content. All this can then be easily rearranged manually if necessary for an optimal collaboration experience. /

Simplicity in AV network & video wall management

We don't do video walls.

We only make sure you can view it all.

At VuWall, our mission is to simplify the life of AV/IT integrators and end users alike, by offering high quality, intuitive visualization solutions for professional applications. The majority of our development effort is driven by customer feedback and industry trends. By staying connected with end users, we succeed in providing AV/IT integrators with solutions that are tailored to their needs, ensuring they are easy to deploy, easy to use and easy to maintain.

Paul Vander Plaetse,
CEO VuWall

// We have built our reputation with solutions that make it easy to use commercial-off-the-shelf hardware for video wall deployments. Today with more and more interconnected AV content, the VuWall experience goes far beyond the simple control of video walls. //

Easy to use & install

Our solutions are easy to deploy, easy to use and easy to manage.

Less hardware

Simplicity: less hardware stands for fewer connections and less risk.

Future proof

With their modular architecture, VuWall's products can be easily upgraded on site as the requirements evolve.

Modular & scalable

Buy only what you need - nothing more, nothing less.

What VuWall can do for you

Manage

VuWall provides software solutions for the operation of large-screen systems and multi-monitor systems. Integrators and operators can control and manage all connected sources in a collaborative way.

The simple and intuitive user interface, which reduces reaction times and integration costs, makes the operation of video wall systems more efficient and cost effective.

Distribute

VuWall can distribute information sources at any time to any display. This is achieved either by using video wall controllers to route the signal, or over the network using modern encoder/decoder devices.

This allows the user to distribute signals from any place to any destination.

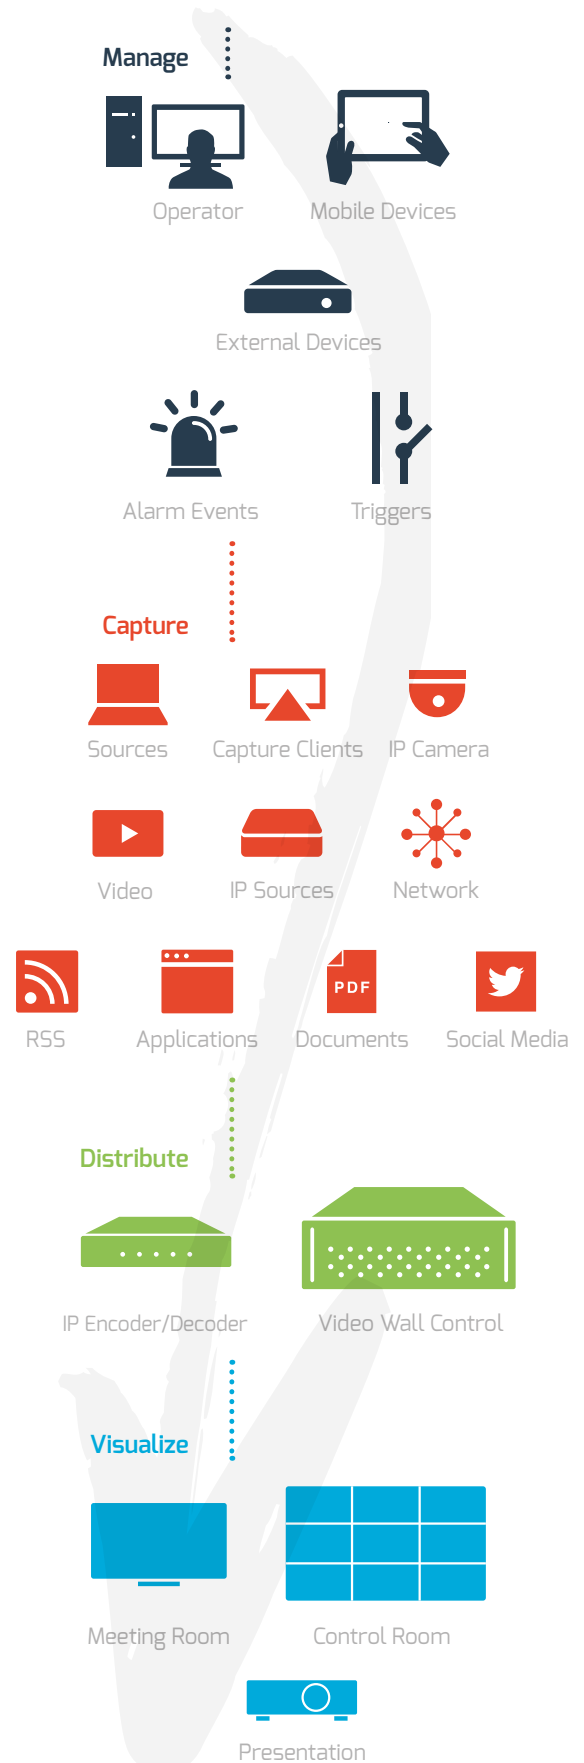

Capture

The VuWall solution supports multiple formats of physical inputs (HDMI, Display-port, HD-SDI, analog video, etc...) and allows decoding of streams from multiple types of sources (cameras, high resolution encoders or even VLC streams).

All these sources can be combined with local applications (presentations, social media feeds, pdf files etc...) in presets that can be easily recalled at any time.

Visualize

Individual information sources can be shown simultaneously on many displays or variously grouped on a video wall. This results in an endless variety of multi-surface configurations.

Products

VuWall2

Multi-platform video wall control software

VuWall2, the common software platform for VuScope, CoScope and Vustation, is a powerful software solution for the operation of large screen systems and multi-monitor systems. VuWall2 provides operators with control over all connected

signal sources and enables distribution of information in control rooms and presentation spaces. The system is based on an intuitive user interface, which reduces reaction time and makes the operation of video wall systems more efficient.

TRx

TRx - AV Network management

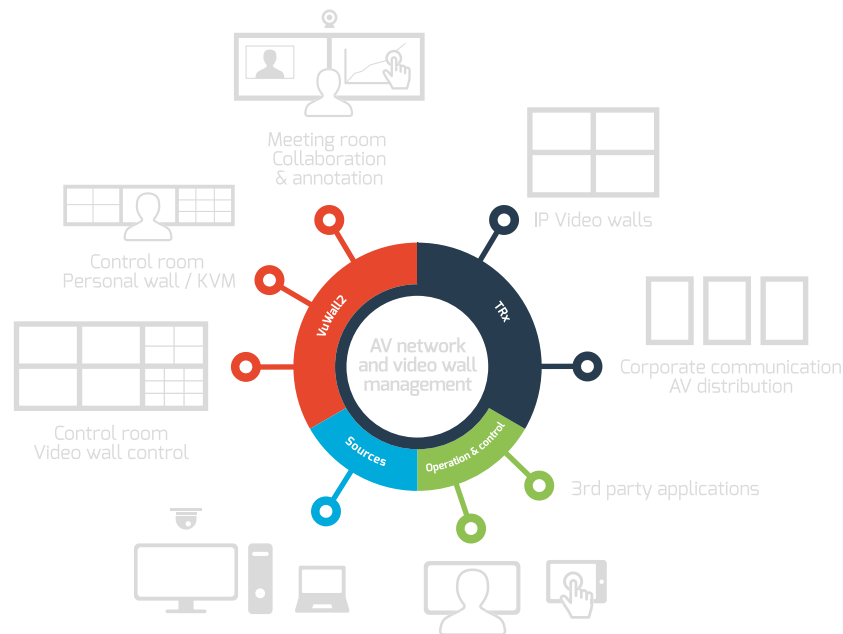

TRx is the next generation of distribution of Audio and Video signals and content over standard IP networks. The solution combines the possibility to drive unlimited numbers of inputs and outputs, and comes with a family of VuWall encoders, decoders, and video wall over IP processors. TRx is also compatible with other manufactures and streaming protocols.

The solution is designed for presentation rooms, control rooms and complex distributions across multiple buildings in a campus. The management of the system is accomplished through a central

TRx Server for an easy deployment of a large number of devices. The intuitive web interface allows to maintain and control the systems from any point on the network.

TRx – Encoders, decoders & IP video walls

VuWall offers a series of encoders, decoders, and video wall over IP processors. The TRx encoders are able to encode and decode signals up to 4K resolutions over standard ethernet networks. The solution is modular for small to large scale systems with multiple video walls or multi-displays.

VuStation

The KVM solution for personal video walls

VuStation enables the operator to seamlessly interact with multiple sources on a monitoring and control level from a single station with a single keyboard and mouse. The collaborative VuStation interface supplies the operator with flexibility to have all critical controls and information at his fingertips on a single surface.

The user friendly interface allows the resizing of all windows across the complete input range, accessing multiple sources even if they are on segregated networks. Interfaces can be set up in any configuration with operator-specific templates and groups.

VuScope

Video wall controllers

VuScope is a series of powerful and modular video wall controllers for small to large scale video walls and single or multi-display projections.

CoScope

Multi-display collaboration and presentation system

CoScope is designed so that all the sources can be displayed together on a single or multiple touch surfaces, creating a true high-resolution, interactive, turn-key display solution for visual collaboration applications. The system is ideally designed for meeting rooms that require easy collaboration and sharing of sources on a touch video wall or touch projection. It features an open platform which supports standard applications.
